Training Course Details

Title: Teamcenter Application and Data Model Administration

Course Objectives: The Teamcenter Application and Data Model Administration course addresses configuration of the Teamcenter data model and setup of the Teamcenter environment to meet your company's needs through the Business Modeler IDE and through data and process implementation scenarios. You will learn how to configure the Business Modeler IDE to extend the data model. Data model extensions covered in this course include creating business objects, classes, options, list of values, constants and rules. You will learn how to input business data and process models into a Teamcenter environment.

Who Should Attend? Application administrators, system administrators, and database administrators.

Agenda overview: Business Modeler IDE process
 Business objects, classes, and datasets
 UML editor
 Lists of values
 Options, constants, and rules
 Project templates
 Users, groups, and roles
 Preferences
 Query and report definitions
